</table>

* In this table, agreement is defined as a match between the primary or alternate reference land-cover label and mapped land-cover class of the corresponding 3x3 pixel window which is homogeneous (using only a subset of the original samples).

* In this table, agreement is defined as a match between the primary or alternate reference land-cover label and the most common land-cover class of the corresponding 3x3 pixel window.

* In this table, agreement is defined as a match between the primary or alternate reference land-cover label and mapped land-cover class of the corresponding single pixel.

Land cover classes are: water (11), perennial ice/snow (12), low density residential (21), high density residential (22), commercial/industrial/transportation (23), bare rock/sand/clay (31), mining (32), transitional (33), deciduous forest (41), evergreen forest (42), mixed forest (43), shrubland (51), orchards/vineyards (61), grasslands (71), hay and pasture (81), cropland (82), small grains (83), bare soil/fallow land (84) urban grass (85), woody wetland (91), emergent (herbaceous) wetland (92).
